

Grip-Gard® Primers

Grip-Gard White Washprimer Light Enhancing

Grip-Gard White Washprimer Light Enhancing is a chrome free, one-component self-etching primer for metal surfaces used in the sign industry and is suitable for most metal substrates including aluminum, steel and galvanized steel.

Grip-Gard White Washprimer Light Enhancing is the only chrome free washprimer in the sign market to provide the easy application properties, the long term adhesion and the excellent corrosion resistance properties of a chrome containing washprimer – with only one coat.

The white color of this primer offers light enhancing capabilities that are ideal for the inside of sign cabinets using LED lighting. This eliminates the need for a separate white topcoat, saving material and time.

With a mixed pot life of 6 months, waste is virtually eliminated.

Grip-Gard White Washprimer Light Enhancing can be directly topcoated with Grip-Gard Plus or Grip-Gard BC Basecoat and does not require a hardener. Simply reduce the primer with the same reducer used in your topcoat and you eliminate the need for additional inventory.

Issue

Akzo Nobel Solution

- Most available washprimers contain hazardous materials such as chrome

- Grip-Gard White Washprimer Light Enhancing is chrome free and NESHAPS 6H compliant

- Chrome free washprimers typically don't perform as well as chrome containing washprimers

- Grip-Gard White Washprimer Light Enhancing provides the same excellent adhesion and corrosion resistant properties as a chrome containing washprimer

- Many washprimers have low film build and contain chrome preventing the ability to sand

- Grip-Gard White Washprimer Light Enhancing has a higher build and is chrome free, allowing the operator to safely sand the surface to an extra smooth finish
