

AkzoNobel

Tomorrow's Answers Today

It's Warm and Sunny in Florida!

January 26, 2012 – AkzoNobel Sign Finishes will again be attending the ISA Show. This year's edition will be held March 22-24 at the Orange County Convention Center in Orlando, FL.

This year, AkzoNobel will be focusing on the Grip-Gard® BC System. It is the most versatile coatings system in the industry. The Grip-Gard BC system provides four different product options – all from one set of toners. Sign shops now have the following options available:

- **Basecoat** – offering the fastest dry and tape times in the market
- **Single Stage** – the fastest single stage 2K urethane system with unmatched color range
- **Translucent** – an easy to apply, fast drying, durable backlit sign coating with clean, consistent colors and a rich appearance
- **Interior** – an interior sign coating offering excellent color fastness and resistance to cleaners and is available in matte or satin finish for interior signs

NEW Grip-Gard Translucent!

The latest addition to the Grip-Gard BC System, Grip-Gard Translucent offers the superior color consistency needed to produce a smooth backlit sign with an excellent appearance. It adheres to most plastic substrates including acrylic, polycarbonate, ABS and most flexible vinyl. As part of the Grip-Gard BC intermix system, a sign shop is able to mix and match thousands of colors including Pantone® and 3M™ vinyl standards plus thousands of corporate program colors. Grip-Gard BC Translucent offers the widest color spectrum in the industry.

In addition, the entire Grip-Gard BC System is lead free, chrome free and NESHAP 6H compliant.

Come by our booth to learn more about the Grip-Gard BC System and all of our other NESHAP 6H compliant sign products.

See you in Orlando!
